## **Hogebuilt Enhances Design on Suspension Specific Brackets**

Goodlettsville, TN (February 25, 2016)

Hogebuilt has enhanced the design for its suspension specific brackets utilizing the patent-pending flush mount technology. Hogebuilt has been producing its custom stainless steel welded brackets in the trucking industry for over 30 years. The new design allows for the triangle arm to be assembled to the base rather than welded.

“Hogebuilt’s brackets are known as the best in the industry—and they just got even better,” said Kyle Denu, Hogebuilt President. “Not only can the user adjust the bracket to the desired angle for the fender, the bracket reduces installation time and has an increased life, too”.

The newly designed 304 stainless steel brackets are available for the majority of Peterbilt, Kenworth and Freightliner suspensions.

Since 1944, Hogebuilt has been the leader in providing premium fenders for the trucking industry. Best known for the 304 mirror finish stainless steel fenders and suspension specific brackets, Hogebuilt quality products are made in the U.S.A. and are available in quarter, single, half-tandem and full-tandem styles.
